PROJECTS

Task Tracker — Python Backend Project (CLI)

GitHub: <https://github.com/moujahentin/roadmap.sh/tree/main/backend/Task%20Tracker>

- Developed a **command-line task tracking application in Python**
- Implemented **CRUD functionality** for task creation, update, deletion and status tracking
- Used **JSON file storage** for data persistence
- Applied **modular design** and separation of concerns
- Handled **input validation and error handling** for user commands

Number Guessing Game — Python Project

GitHub: <https://github.com/moujahentin/roadmap.sh/tree/main/backend/Number%20Guessing%20Game>

- Developed a Python-based **number guessing game** with user interaction via the console
- Implemented program logic, loops, conditional branching and input validation
- Demonstrates solid understanding of Python syntax and control flow
- Focused on clean code structure and user-friendly output

GitHub User Activity — Python API Integration Project

Write here the description...GitHub: <https://github.com/moujahentin/roadmap.sh/tree/main/backend/GitHub%20User%20Activity>

- Developed a Python application that interacts with the **GitHub API** to fetch and display user activity data
- Implemented **HTTP requests**, API authentication and response handling using Python libraries
- Parsed and processed JSON data to extract meaningful insights
- Built a clean output format to display activity statistics
- Demonstrates strong skills in API integration, data handling and scripting automation

Clicker — Python Interactive CLI Tool

GitHub: <https://github.com/moujahentin/personalProjects/tree/main/clicker>

- Developed a Python-based **interactive clicker tool** with a graphical display in the console
- Implemented user input handling, real-time updates and counter logic
- Utilized Python fundamentals including loops, functions and event-driven input
- Structured code for readability and modularity

“Klirosi” — Python CLI Lottery Simulator

GitHub: <https://github.com/moujahentin/personalProjects/tree/main/klirosi>

- Developed a **Python-based console application** simulating a lottery number generator
- Implemented random number generation, user interaction and conditional logic
- Applied Python fundamentals: loops, functions, data structures, and output formatting
- Designed for interactive use with clear feedback and simple interface

Website for a locksmith business

Professional website for a locksmith business based in Volos created in Webnode.
